

Financial Projection — by account type

Illustrative unit economics & a scalable territory model · monthly figures unless noted · USD

Model assumptions. Core **\$19.99**/mo, Pro **\$49.99**/mo; customers free. Add-on attach assumed **\$8/mo** avg per Core and **\$10/mo** avg per Pro (≈0.5–0.7 add-ons). Territory business mix **70% Core / 30% Pro**. Community Coordinators keep **70%** of their territory's gross; the platform keeps **30%** (and 100% of any direct, non-territory business). Figures ignore Stripe fees (~2.9%+30¢) and the yearly discount (2 months free); most businesses pay monthly.

1 · Unit economics by account type (per month)

ACCOUNT TYPE	PAYS CIRQLBACK	COORDINATOR EARNS*	PLATFORM NETS*	VALUE TO THE PLATFORM
Customer	\$0 (free)	—	\$0	Engagement + foot traffic that drives business retention
Business — Core (+add-ons)	\$27.99	\$19.59	\$8.40	Recurring SaaS + add-on expansion
Business — Pro (+add-ons)	\$59.99	\$41.99	\$18.00	Higher ARPU, multi-location, add-ons
Coordinator (partner)	\$0	keeps 70%	keeps 30%	Distribution: onboards & retains local businesses

*In a coordinator territory. A direct (non-territory) business contributes 100% of its payment to the platform.

2 · A mature territory (50 businesses: 35 Core, 15 Pro)

LINE	MONTHLY	ANNUAL
35 Core subscriptions	\$699.65	\$8,396
15 Pro subscriptions	\$749.85	\$8,998
Add-ons (35×\$8 + 15×\$10)	\$430.00	\$5,160
Gross territory revenue	\$1,879.50	\$22,554
→ Coordinator (70%)	\$1,315.65	\$15,788
→ Platform (30%)	\$563.85	\$6,766

Read-across. One healthy 50-shop territory is a **~\$15.8k/yr** income stream for a coordinator and **~\$6.8k/yr** to the platform — on top of the value customers get for free. The model scales by adding territories (coordinators), not by charging customers.

3 · Platform scale — illustrative 3-year ramp

YEAR	TERRITORIES	AVG MATURITY	GROSS ARR	COORDINATORS EARN	PLATFORM NET (30%)
Year 1	5	40%	\$45,108	\$31,576	\$13,532
Year 2	15	65%	\$219,902	\$153,931	\$65,971
Year 3	30	80%	\$541,296	\$378,907	\$162,389

Gross ARR = territories × \$22,554 × maturity. "Maturity" is the average % of a full 50-shop territory reached, blending newer and older territories. Platform net excludes any direct (100%-retained) businesses, which are upside.

4 · What moves the numbers

LEVER	EFFECT
Pro mix ↑ (e.g. 40% Pro)	+~18% territory ARPU — Pro is 2.5× Core.
Add-on attach ↑ (1 add-on/biz)	+~\$3–5k/yr per mature territory.
Retention ↑ (churn ↓)	Compounds: SaaS value is in the renewal, not the sale.
Direct (non-territory) businesses	Platform keeps 100% — pure upside vs. the 30% shown.

Illustrative model, not a forecast. These figures show how the economics compose per account type at stated assumptions. Actual results depend on onboarding pace, plan/add-on mix, retention, and Stripe processing fees (~2.9% + 30¢/charge). Customers are always free; revenue is generated by businesses and shared with coordinators.
